SUMMARY

As a passionate and ambitious BCA student, I am excited to apply for the Developer role at your esteemed organization. With a strong foundation in programming, analytical thinking, and problem-solving skills, I am confident in my ability to excel in this position. Throughout my academic journey, I have honed my expertise in the MERN Stack and Python, which have equipped me with the necessary skills to tackle a wide range of development challenges. Additionally, I possess a solid understanding of Java and Android Studio, further expanding my technical capabilities. Driven by a proactive and self-motivated mindset, I am skilled in translating complex requirements into efficient and effective solutions. My strong communication skills, both written and oral, allow me to collaborate seamlessly with cross-functional teams and ensure the successful delivery of projects. I am confident that my diverse skillset, coupled with my passion for continuous learning and problem-solving, make me an ideal candidate for the Developer role. I am excited about the opportunity to join your team and contribute to the success of your organization.

PROJECTS

NAVITA, AI TRAVEL GUIDE　　　　　　　　　　　　　　　　　　　　　　　　　　　　　　　**2024**

- "Navita - The AI-powered Solution" is an advanced travel companion designed to revolutionize the way travelers explore the world. Leveraging cutting-edge AI technology, Navita offers personalized travel recommendations. Real-time updates to ensure travelers are always informed. Includes an AI-powered chatbot for effortless communication. Includes tools like a currency converter, GPS navigation, AI- historical recreation, AI storytelling mode and a local guide information system.

WEATHER APP　　　　　　　　　　　　　　　　　　　　　　　　　　　　　　　　　　　**2024**
- A responsive, user-centric web application designed to provide instant, location-based weather insights. Leveraging the OpenWeatherMap API, the application enables users to retrieve current meteorological data through two primary interaction methods: manual city search and geolocation-based retrieval.
